

# Python Developer - Remote

## Introduction:

The mission of [OneUpOneDown](#) is to make great advice and authentic connections more accessible. Our product is a near-peer mentoring platform which makes it easy to create and manage mentor matches.

We believe the very best functionality comes as a result of deep technical insights led by engineering. We're seeking an exceptional engineer to join our team, a builder who loves to take ownership and get excited about the prospect of building applications and features end-to-end.

Fully remote, our team has employees around the world and encourages a modern work approach - one that is flexible and empathetic while maintaining high standards and accountability. **We're a 100% remote company**, and we encourage travel by our employees. We are changing every day, and learning a lot along the way. We're open to international (contractor) hires, but you must be able to work GMT hours.

We are looking for an experienced and talented Python Developer to join our team who will fit with this work ethic and is willing to learn from other members as well as share your own knowledge with the team. Teamwork and friendship is the key to working at OneUpOneDown.

## Required:

- Degree in Computer Science or closely related field
- 4+ years development background
- Strong knowledge of Python. Rust, C++, C#, R or Java a plus.
- Experience with AWS development is a must
- Strong technical knowledge of systems supporting large, complex data sets in a performant, scalable manner
- Analytical skills – Ability to troubleshoot and logically assess problems and determine solutions
- Documentation skills – ability to represent ideas, requirements, and problems in clear and concise documents
- Experience building clean, performant, tested and maintainable code
- Strong oral and written communications skills
- 

## From us you get:

- Full-time employment
- Fully remote-work
- Flexible working hours
- The opportunity not only to work in a successful, dynamic and friendly environment, but most importantly to develop with it
- Fantastic progression opportunities as the company grows

If you are interested in our job offer, please send a CV, portfolio and your Github profile if you own. Applications will be processed in confidentiality.

**Email for Applications:** [hello@oneuponedown.org](mailto:hello@oneuponedown.org)

Short-listed candidates will be contacted via Phone Call.
